

Benefits of the Fujitsu Tablet Program

As our generation advances in this technological era, learning and our education become more and more entwined with the new and upcoming technology. This is apparent in college, where a laptop becomes a student's best friend and most useful tool in achieving their higher education. As most students, including myself, and striving for an engineering degree, it is vital to us to be able to use and understand the top technology that is out. Engineering involves using this technology to make us a better world, so it is a significant part to our education.

One of the most convenient components of the tablet program is the ability to take it in if it is causing problems or not working. There is no long line to wait in or phone call to be made, one can simply take it down to the tablet place and have it fixed. There are no worries about fixing it, which takes some of the stress load off of busy college students and lets them focus more with what they are doing with their laptop. Another benefits to the tablets are that they have so many programs and systems already downloaded and ready to go, that a student is ready for class and its class work, no sweat.

Another prominent benefit to the Fujitsu tablet is the ability to be a tablet. This is handy and beneficial for easy notetaking in class, not only saving paper for the environment, but also having all of your notes in one, easily accessible spot on your computer. Since we have reached a new age of technology within our education, more and more teachers do most of their work and homework online, and having such a fitted-laptop makes working with teachers and getting the class work done that much easier.

The Fujitsu tablet program does even more than this: it lifts the burden of purchasing your own laptop and programs, and allows students to connect with each other and easily help each other knowing they have the same technology at hand. It also allows for easier group work to be accomplished, in that everyone knows that everyone has the same technology and computer. To have such high technology and such a great device at my fingertips will allow for me to excel in education and reach beyond my full potential.

Sincerely,
Sarah Kelly
